NEWS RELEASE

Olson Heating, Cooling & Appliances was honored at the Annual Dealer Meeting as GeoComfort Geothermal Gold Club Sales Member.

On May 8th, 2007 Olson Heating, Cooling & Appliances, located in Mount Horeb, WI, attended the annual GeoComfort geothermal heating and air conditioning equipment Dealer Meeting hosted by Northern Geothermal Corp., distributor of GeoComfort geothermal systems. The meeting was held at the Stoney Creek Inn in La Crosse, Wisconsin. While at this meeting, Olson Heating, Cooling & Appliances was honored as one of the top dealers in a nine state coverage area. Olson Heating, Cooling & Appliances has been successfully installing GeoComfort geothermal systems for several years.

Olson Heating, Cooling & Appliances offers the complete line of GeoComfort geothermal equipment and accessories for residential and commercial heating, cooling and water heating systems.

GeoComfort Geothermal units are designed to harness the earth's natural energy for heating and cooling. For years, value-conscious homeowners have been discovering the advantages of heating, cooling and producing hot water with geothermal energy and GeoComfort products.

Geothermal systems are highly energy-efficient since they only require a relatively small amount of electricity to harness the renewable energy in the earth. GeoComfort units typically deliver up to four times more energy than they consume, so you save on your monthly energy bills when compared to other types of heating and cooling systems.

Recent headlines have warned consumers about the new increases on natural gas and propane. Homes and businesses that are space conditioned by a GeoComfort geothermal system enjoy the luxury of using the earth's energy instead of buying escalating fossil fuel.
